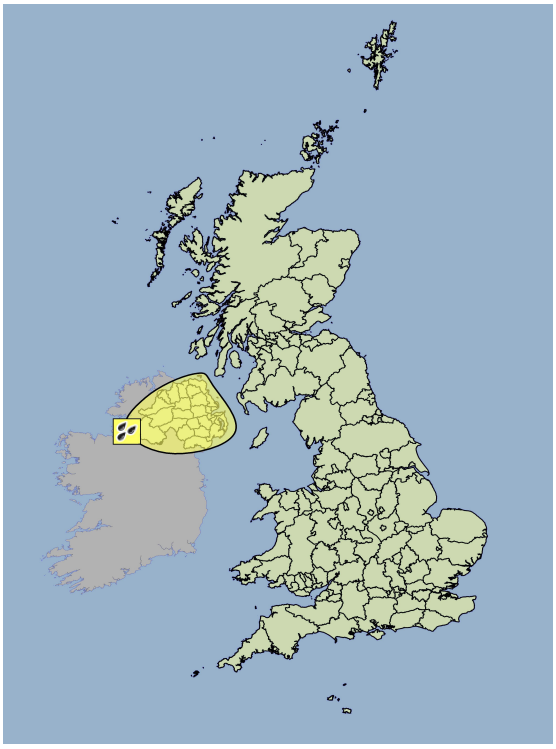
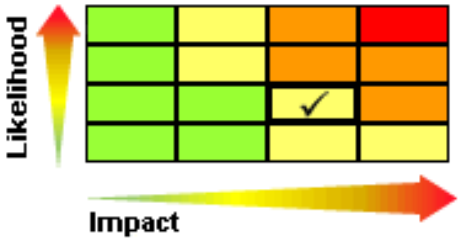
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing frontal system is expected to move east across Northern Ireland during Thursday and into Friday, bringing persistent and, at times, heavy rain. Many places may see 20-40 mm during the period, with as much as 50-70 mm over south-facing hills. With this bout of heavy rain coming after a few wet days, localised flooding is a possibility either from some rivers or from surface water.

There remains a large degree of uncertainty regarding the track and timing of this system and this warning will be updated in the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **12:00 on Thu, 13th Nov 2014** until **12:00 on Fri, 14th Nov 2014**

A developing frontal system is expected to bring another period of persistent, and at times heavy rain to Northern Ireland during Thursday and into Friday. The rain is likely to be accompanied by strong and gusty winds.

The public should be aware of the risk of localised flooding.
